Standarder får världen att fungera

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.

Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Europastandarden EN 206-9:2010 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av EN 206-9:2010.

The European Standard EN 206-9:2010 has the status of a Swedish Standard. This document contains the official English version of EN 206-9:2010.

Beton - Teil 9: Ergänzende Regeln für selbstverdichtenden
Beton (SVB)

This European Standard was approved by CEN on 27 February 2010.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 206-9:2010) has been prepared by Technical Committee CEN/TC 104 “Concrete and related products”, the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by October 2010, and conflicting national standards shall be withdrawn at the latest by October 2010.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

This European Standard is additional to EN 206-1:2000 and it gives the rules for self-compacting concrete (SCC). Common rules are not repeated in this European Standard and as a consequence, it has to be used with EN 206-1:2000. When EN 206-1:2000 is revised, this European Standard will be merged into the main document.

The numbering of this European Standard follows EN 206-1:2000.

Introduction

Self-compacting concrete (SCC) is an evolving technology and practices vary. This European Standard sets common requirements, but where this is not possible the relevant clause contains permission for the application of national standards or provisions valid in the place of use of the concrete.

This European Standard will be applied in Europe under different climatic and geographical conditions, different levels of protection and under different, well established, regional traditions and experience. Classes for self-compacting concrete properties have been introduced to cover this situation. Where such general solutions were not possible, the relevant clauses contain permission for the application of national standards or provisions valid in the place of use of the concrete.

In tables, notes and footnotes in this European Standard are normative unless stated otherwise; other notes and footnotes are informative.

Further explanations and guidance on the application of this European Standard are given in other documents valid in the place of use.

Further guidance on the production and other aspects of SCC is given in The European Guidelines for Self-Compacting Concrete – Specification, Production and Use , see also Annex D.

1 Scope

This European Standard applies to SCC for structures cast in situ, precast structures, and structural precast products for buildings and civil engineering structures.

This European Standard applies to SCC which is self-compacting by gravity to retain no appreciable amount of entrapped air other than entrained air. This Standard applies to normal-weight concrete. Experience with SCC containing light-weight or heavy-weight aggregate and fibres is limited. Some but not all provisions of this Standard apply for these forms of SCC but the requirements have to be determined on a case by case basis.

The SCC may be mixed on site, ready-mixed concrete or produced in a plant for precast concrete products.

In addition to those in EN 206-1:2000, this European Standard specifies requirements for:

- the constituent materials of SCC;
- the properties of fresh and hardened SCC and their verification;
- the limitations for SCC composition;
- the specification of SCC;
- the factory production control procedures;
- the conformity criteria.

Other European Standards for specific products e.g. precast products or for processes within the field of the scope of this European Standard may require or permit deviations from this European Standard.

The limitations described in the scope of EN 206-1:2000 apply to SCC conforming to this European Standard.

This European Standard does not cover health and safety requirements for the protection of workers during production and delivery of concrete.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 206-1:2000, *Concrete - Part 1: Specification, performance, production and conformity*

FprEN 12350-8, *Testing fresh concrete - Part 8: Self-compacting concrete – Slump-flow test*

FprEN 12350-9, *Testing fresh concrete - Part 9: Self-compacting concrete – V-funnel test*

FprEN 12350-10, *Testing fresh concrete - Part 10: Self-compacting concrete – L box test*

FprEN 12350-11, *Testing fresh concrete - Part 11: Self-compacting concrete – Sieve segregation test*

FprEN 12350-12, *Testing fresh concrete - Part 12: Self-compacting concrete – J-ring test*

3 Terms, definitions, symbols and abbreviations

3.1 Terms and definitions

For the purposes of this document, the terms and definitions given in EN 206-1:2000 and the following apply.

3.1.47

self-compacting concrete (SCC)

concrete that is able to flow and compact under its own weight, fill the formwork with its reinforcement, ducts, boxouts etc., whilst maintaining homogeneity

3.1.48

flowability

the ease of flow of fresh SCC when unconfined by formwork and/or reinforcement

3.1.49

segregation resistance

the ability of fresh SCC to remain homogeneous in composition while in its fresh state

3.1.50

slump-flow

the mean diameter of the spread of fresh SCC from a conventional slump cone

3.1.51

viscosity

the resistance to flow of fresh SCC once flow has started

3.1.52

passing ability

the ability of fresh SCC to flow through tight openings such as spaces between steel reinforcing bars without segregation or blocking

3.2 Symbols and abbreviations

For the purposes of this document, the symbols and abbreviations given in EN 206-1:2000 and the following apply.

SCC	Self-compacting concrete
SF	Slump-flow class
VS	Viscosity class for the t_{500} test
VF	Viscosity class for the V-funnel test
t_{500}	Time in seconds to flow to a diameter of 500 mm in a slump-flow test
PL	Passing ability class for the L-box-test
PJ	Passing ability class for the J-ring-test
SR	Segregation resistance class
