Standarder får världen att fungera

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.

Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Denna tekniska specifikation är inte en svensk standard. Detta dokument innehåller den engelska språkversionen av ISO/TS 13399-80:2017.

Dokumentet ersätter SIS-ISO/TS 13399-80:2014.

This Technical Specification is not a Swedish Standard. This document contains the English version of ISO/TS 13399-80:2017.

The document replaces SIS-ISO/TS 13399-80:2014.

SIS-ISO/TS 13399-80:2017 (E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 29, *Small tools*.

This second edition cancels and replaces the first edition (ISO/TS 13399-80:2014), which has been technically revised.

A list of all parts in the ISO 13399 series can be found on the ISO website.

Introduction

This document defines the concept, terms, and definitions regarding the creation and exchange of simplified 3D of cutting items, tool items, and adaptive items that can be used for NC-programming, simulation of the manufacturing processes and the determination of collision within machining processes. It is not intended to standardize the design of the items themselves.

Cutting tool data that can be described by the ISO 13399 series include, but are not limited to, everything between the work piece and the machine tool. Information about inserts, solid tools, assembled tools, adaptors, components, and their relationships can be represented by this document. The increasing demand providing the end user with 3D models for the purposes defined above is the basis for the development of this series of International Standards.

The objective of the ISO 13399 series is to provide the means to represent the information that describes cutting tools in a computer sensible form that is independent from any particular computer system. The representation will facilitate the processing and exchange of cutting tool data within and between different software systems and computer platforms and support the application of this data in manufacturing, planning, cutting operations, and the supply of tools. The nature of this description makes it suitable not only for neutral file exchange, but also as a basis for implementing and sharing product databases and for archiving. The methods that are used for these representations are those developed by ISO/TC 184/SC 4, by using standardized information models and reference dictionaries.

Definitions and identifications of dictionary entries are defined by means of standard data that consist of instances of the EXPRESS entity data types defined in the common dictionary schema, resulting from a joint effort between ISO/TC 184/SC 4 and IEC/TC 3 and in its extensions defined in ISO 13584-24 and ISO 13584-25.

Cutting tool data representation and exchange —

Part 80: Creation and exchange of 3D models — Overview and principles

1 Scope

This document specifies the basic principles for the creation and exchange of simplified 3D models of cutting items, tool items, and adaptive items, using related properties and domains of values.

Simplified 3D models contain the following:

- naming and defining of the basic design features of cutting items, tool items, and adaptive items, with an association to the used properties;
- naming and defining of the internal structure of the 3D model that represents the features and the properties of cutting items, tool items, and adaptive items;
- naming and defining of those elements and features that are not defined in ISO/TS 13399-50, but are necessary to design 3D models.

The following are outside the scope of this document:

- applications where these standard data may be stored or referenced;
- creation and exchange of simplified 3D models for cutting tools;
- creation and exchange of simplified 3D models for tool items;
- creation and exchange of simplified 3D models for adaptive items;
- creation and exchange of simplified 3D models for assembly items and auxiliary items.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/TS 13399-2, *Cutting tool data representation and exchange — Part 2: Reference dictionary for the cutting items*

ISO/TS 13399-60, *Cutting tool data representation and exchange — Part 60: Reference dictionary for connection systems*

ISO/TS 13399-100:2008, *Cutting tool data representation and exchange — Part 100: Definitions, principles and methods for reference dictionaries*

3 Terms and definitions

No terms and definitions are listed in this document.

SIS-ISO/TS 13399-80:2017 (E)

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <http://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

4 Abbreviated terms

CRPa	cutting reference point
CSWa	coordinate system workpiece side
FDP	feed direction primary
HEP	head end plane
IRPOSa	irregular insert position
KAPa	rotation angle “kappa” for the yzw-plane counter clockwise about the y-axis
LCFP	chip flute length plane
LPRP	protruding length plane
LSP	shank length plane
LUP	usable length plane
MINSTa	master insert
MPLANEa	mirror plane
PAIPa	prismatic adaptive item position
PCSa	primary coordinate system
PHIa	rotation angle “phi” for the xzw-plane counter clockwise about the z-axis
PTIPOSa	prismatic tool item position
REFSYSa	reference system
RHOa	rotation angle “rho” for the xyw-plane counter clockwise about the x-axis
RIPOSa	regular insert position
TCEPa	tool cutting edge plane
TEP	tool end plane
TFPa	tool feed plane
TRPa	tool rake plane
TSPa	theoretical sharp point
XYPa	xy-plane
XYWDa	xyw plane distance
XYWPa	xyw-plane

XZPa	xz-plane
XZWDa	xzw plane distance
XZWPa	xzw-plane
YZPa	yz-plane
YZWDa	yzw plane distance
YZWPa	yzw-plane

a Taken from ISO/TS 13399-50.

5 Designation of design elements

5.1 General

The creation of 3D models shall be by means of nominal dimensions.

NOTE Some of the designations are taken from ISO/TS 13399-50.

All designations of 3D design elements (coordinate systems, planes, axes, points, solid design elements) shall be based on the designations and preferred symbols of ISO/TS 13399-2 and ISO/TS 13399-60.

If additional properties are required, they shall be requested through the ISO 13399 Maintenance agency as defined in ISO/TS 13399-100:2008, Annex D.

5.2 Reference system

5.2.1 Primary coordinate system "PCS"

The primary coordinate system, as shown in [Figure 1](#), shall consist of the following standard elements:

- right-handed rectangular Cartesian system in three-dimensional space with three principal axes labelled X, Y, and Z;
- three orthogonal planes built from the three principal axes and named "XYP", "XZP", and "YZP";
- three orthogonal axes built from the planes and named "XA", "YA", and "ZA".
