Standarder får världen att fungera

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.

Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Europastandarden EN ISO 19144-1:2012 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av EN ISO 19144-1:2012.

Denna standard ersätter SS-ISO 19144-1:2009, utgåva 1.

The European Standard EN ISO 19144-1:2012 has the status of a Swedish Standard. This document contains the official version of EN ISO 19144-1:2012.

This standard supersedes the Swedish Standard SS-ISO 19144-1:2009, edition 1.

**Förhållandet till övriga delar under samma huvudtitel - Utdrag ur Förord i ISO 19144-1:2009/
Relations to other parts under the same general title - Extract from the Foreword of
ISO 19144-1:2009**

ISO 19144 consists of the following parts, under the general title *Geographic information — Classification systems*:

- *Part 1: Classification system structure*

The following part is under preparation:

- *Part 2: Land cover classification system (LCCS)*

English Version

**Geographic information - Classification systems - Part 1:
Classification system structure (ISO 19144-1:2009)**

Information géographique - Systèmes de classification -
Partie 1: Structure de système de classification (ISO
19144-1:2009)

Geoinformation - Klassifizierungssysteme - Teil 1: Struktur
des Klassifizierungssystems (ISO 19144-1:2009)

This European Standard was approved by CEN on 9 March 2012.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Foreword

The text of ISO 19144-1:2009 has been prepared by Technical Committee ISO/TC 211 “Geographic information/Geomatics” of the International Organization for Standardization (ISO) and has been taken over as EN ISO 19144-1:2012 by Technical Committee CEN/TC 287 “Geographic Information” the secretariat of which is held by BSI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by October 2012, and conflicting national standards shall be withdrawn at the latest by October 2012.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Endorsement notice

The text of ISO 19144-1:2009 has been approved by CEN as a EN ISO 19144-1:2012 without any modification.

SS-EN ISO 19144-1:2012 (E)

Introduction

This part of ISO 19144 is based on publications of the Food and Agriculture Organization (FAO) of the United Nations ^{[1][2]}. The first in a series of International Standards related to geographic classification systems, it defines the structure of such systems, together with the mechanism for defining and registering classifiers.

Since there are many different possible application areas, there is no single classification system that will serve all needs. The method by which classifiers are defined depends upon the application area. In addition, the classifiers used within a particular application area might not be adequate for all situations encountered within that application area and could need to be augmented over time. To facilitate extension of the set of classifiers in a particular application area, classifiers are registered in a register structure compliant with ISO 19135. This allows the set of classifiers to be maintained. The use of the ISO 19135 registration mechanism allows for separate registers to be defined for different sets of classifiers within multiple information communities, thereby satisfying application needs. This approach allows for independence between information communities, but also allows relationships to be developed between different classification systems that potentially allow the conversion, or partial conversion, of data from one classification system to another, or the fusion of data from two separate sources.

The concept of classification systems is well known in the geographic information community. A classification system can be used to subdivide any geographic area into small units, each of which carries an identifier that describes its type. The results can then be represented as a discrete coverage as described in ISO 19123. Many such classification systems can be defined to address any geographic area. Different application areas and different information communities can define their own classification systems. However, if the classification system is defined in a compatible way, interaction between different information communities becomes possible. In addition, in a particular application area, it is desirable that there be a few well-established classification systems, and that these themselves be standardized within information communities.

This part of ISO 19144 describes the common structure, while subsequent parts will allow for the standardization of specific classification systems.

A *coverage* is a function that returns values from its range for any direct position within its spatial, temporal or spatiotemporal domain. A *discrete coverage* is a function that returns the same feature attribute values for every direct position within any single spatial object, temporal object or spatiotemporal object in its domain. The domain is an area covered by the coverage function, and the discrete coverage breaks that area down into a set of spatial, temporal or spatiotemporal objects. The geometry of the discrete coverage used to represent the results of applying a classification system can be any type of discrete coverage — for example, a set of polygons fitted together like a jig-saw puzzle, a set of grid cells, or a set of points or curves.

A classification system consists of a set of classifiers. These classifiers may be algorithmically defined, or established according to a set of classification system definitions. The classifiers are application-area-dependent and are or will be defined in the other parts of ISO 19144 or other standards or publications. A register allows for the maintenance of a set of classifiers for a particular application area. A spatial, temporal or spatiotemporal object defined in terms of a set of classifiers is a *classified* object.

There is a commonality between conventional geographic features and classified objects. A *feature* is defined in ISO 19101 as an abstraction of real world phenomena. An example of a class of feature is a *building*, and a particular building, e.g. the UN building in New York, is an instance of a *feature class*. Conventional geographic features are *atomic units* that are assembled to build one type of geographic information data set.

A classification system works in the opposite manner, from the top down, by successively decomposing the whole within a coverage area. Classified objects are features, in that they are an abstraction of a real world phenomena, but classified objects are *not* atomic, because they are necessarily related to each other by the classifiers that decompose the whole. In a simple example of a classification system, the earth as a whole can be covered by either “land” or “water”, and two classifiers can be defined partitioning the attribute range into

SS-EN ISO 19144-1:2012 (E)

two, identifying objects as being either land or water. Any particular area on the earth, corresponding to a classified object, would be of type “land” or “water”.

ISO 19135 specifies that a *technical standard* be required to define the item classes in any conformant register. This part of ISO 19144 defines schemas for registers conformant to ISO 19135 and serves as the technical standard that defines the item classes required for the registration of classifiers. It establishes a set of rules for specifying definitions that can be used in a particular context to establish classified objects.

Registers of classifiers can serve as sources of reference for similar registers established by other geographic information communities as part of a system of cross-referencing. Cross-referencing between respective items in registers of classifiers might be difficult in cases where the structure of registers differs between information communities. This part of ISO 19144 can serve as a guide for different information communities for the development of compatible registers that can support a system of classifier cross-referencing.

The structure of a classification system together with the mechanism of defining and registering classifiers defined in this part of ISO 19144 is general and can be applied to many different information-community-defined classification systems, including soil, landform, vegetation, urbanization and systems for understanding biodiversity and climate change. The use of this document will allow the relationship between different classification systems to be described.

Geographic information — Classification systems —

Part 1: Classification system structure

1 Scope

This part of ISO 19144 establishes the structure of a geographic information classification system, together with the mechanism for defining and registering the classifiers for such a system. It specifies the use of discrete coverages to represent the result of applying the classification system to a particular area and defines the technical structure of a register of classifiers in accordance with ISO 19135.

The structure can be used to develop specific classification systems that address particular application areas, specified in other parts of ISO 19144.

2 Conformance

2.1 Classes

Three conformance classes are identified in this part of ISO 19144.

2.2 Conformance of a classification system

Any classification system for which conformance to this part of ISO 19144 is claimed shall be in accordance with Annex A (see A.2).

2.3 Conformance of a register of classifiers

Any register of classifiers for which conformance to this part of ISO 19144 is claimed shall be in accordance with Annex A (see A.3) and ISO 19135:2005, A.1.

2.4 Representation of classification results

Any legend of classifiers for which conformance to this part of ISO 19144 is claimed shall be in accordance with Annex A (see A.4).
