Standarder får världen att fungera

SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.

Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på www.sis.se eller ta kontakt med oss på tel 08-555 523 00.

Standards make the world go round

SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.

Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

If you want to know more about SIS, or how standards can streamline your organisation, please visit www.sis.se or contact us on phone +46 (0)8-555 523 00

Denna tekniska specifikation är inte en svensk standard. Detta dokument innehåller den engelska språkversionen av ISO/TS 19150-1:2012.

This Technical Specification is not a Swedish Standard. This document contains the English version of ISO/TS 19150-1:2012.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

In other circumstances, particularly when there is an urgent market requirement for such documents, a technical committee may decide to publish other types of normative document:

- an ISO Publicly Available Specification (ISO/PAS) represents an agreement between technical experts in an ISO working group and is accepted for publication if it is approved by more than 50 % of the members of the parent committee casting a vote;
- an ISO Technical Specification (ISO/TS) represents an agreement between the members of a technical committee and is accepted for publication if it is approved by 2/3 of the members of the committee casting a vote.

An ISO/PAS or ISO/TS is reviewed after three years in order to decide whether it will be confirmed for a further three years, revised to become an International Standard, or withdrawn. If the ISO/PAS or ISO/TS is confirmed, it is reviewed again after a further three years, at which time it must either be transformed into an International Standard or be withdrawn.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO/TS 19150-1 was prepared by Technical Committee ISO/TC 211, *Geographic information/Geomatics*.

ISO/TS 19150 consists of the following parts, under the general title *Geographic information — Ontology*:

- *Part 1: Framework*
- *Part 2: Rules for developing ontologies in the Web Ontology Language (OWL)¹⁾*

The following parts are under development:

- *Part 3: Semantic operators*
- *Part 4: Service ontology*
- *Part 5: Domain ontology registry*
- *Part 6: Service ontology registry*

1) To be published.

Introduction

For more than two decades (since the World Wide Web was established) the web has been a network of data with proper syntax (structure) but without any meaning (semantics) to the machine. The Semantic Web has introduced the Web of data. The Semantic Web became an extension of the already existing web of data, by adding machine-processable data (with embedded semantics) as opposed to just documents. It can be seen as a tremendous worldwide open database that people can query from their own perspective, understanding, or abstraction of real world phenomena or events and get accurate, detailed, and appropriate answers. This approach involves reasoning capabilities based on ontologies. Following this path the notion of “Linked Data” has been introduced for data of various kinds, coming from different sources, to be connected together on the Web by the way of HTTP URIs. As a consequence, the Semantic Web and Linked Data bring new opportunities for the geographic information realm to lay out a new generation of standards in order to benefit from these in achieving semantic interoperability of geographic information.

Ontology consists of a formal representation of phenomena of a universe of discourse with an underlying vocabulary including definitions and axioms that make the intended meaning explicit and describe phenomena and their interrelationships. It supports the representation of concepts that supports the interpretation of data and reasoning to concur to semantic interoperability. Data from different disciplines including geographic information can be integrated and contribute to addressing from specific (e.g. oil spill) to global problems (e.g. climate change).

This Technical Specification defines a high level framework that structures the standards specifically addressing the semantics of geographic information through ontologies. The proposed other parts of the framework include:

ISO 19150-2, *Geographic information — Ontology — Part 2: Rules for developing ontologies in the Web Ontology Language (OWL)*, defines rules and guidelines for the development of ontologies in OWL-DL, including a mapping between UML class diagram elements and OWL-DL and rules for describing application schemas in OWL-DL.

ISO 19150-3, *Geographic information — Ontology — Part 3: Semantic operators*, defines semantic proximity operators between concepts that complement geometric and temporal operators.

ISO 19150-4, *Geographic information — Ontology — Part 4: Service ontology*, identifies the framework for service ontology and defines the description of Web services for geographic information in an ontology language.

ISO 19150-5, *Geographic information — Ontology — Part 5: Domain ontology registry*, defines an international registry of geographic information domain ontologies and its maintenance.

ISO 19150-6, *Geographic information — Ontology — Part 6: Service ontology registry*, defines an international registry of geographic information service ontologies and its maintenance.

These parts are completed with the ISO/TC 211 Harmonized ontologies that consist of a set of OWL-DL ontologies that translate and complement the ISO/TC 211 Harmonized models developed in UML.

This Technical Specification is intended to be used primarily by standards developers in geographic information. It can also benefit information system analysts, program planners and developers of ISO geographic information standards. It will improve understanding of the basic principles of semantic interoperability and their consistent application to geographic information.

Geographic information — Ontology —

Part 1: Framework

1 Scope

This Technical Specification defines the framework for semantic interoperability of geographic information. This framework defines a high level model of the components required to handle semantics in the ISO geographic information standards with the use of ontologies.

2 Conformance

Any documents claiming conformance with this Technical Specification shall pass the requirements described in the abstract test suite presented in Annex A.

3 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/TS 19103:2005, *Geographic information — Conceptual schema language*

ISO 19109:2005, *Geographic information — Rules for application schema*

ISO 19119:2005, *Geographic information — Services*

ISO 19135:2005, *Geographic information — Procedures for item registration*

4 Terms and definitions

For the purpose of this document, the following terms and definitions apply.

4.1 application schema

conceptual schema (4.3) for *data* (4.4) required by one or more applications

[SOURCE: ISO 19101-1:—²], 4.1.2]

4.2 conceptual model

model that defines concepts of a universe of discourse

[SOURCE: ISO 19101-1:—³], 4.1.5]

2) To be published.

3) To be published.

4.3
conceptual schema

formal description of a *conceptual model* (4.2)

[SOURCE: ISO 19101-1:—⁴), 4.1.6]

4.4
data

reinterpretable representation of *information* (4.7) in a formalized manner suitable for communication, interpretation, or processing

[SOURCE: ISO/IEC 2382-1:1993, 01.01.02]

4.5
feature

abstraction of real world phenomena

[SOURCE: ISO 19101-1:—⁵), 4.1.11]

4.6
framework

logical structure for classifying and organizing complex *information* (4.7)

[SOURCE: ISO/TS 27790:2009, 3.27]

4.7
information

knowledge (4.8) concerning objects, such as facts, events, things, processes, or ideas, including concepts, that within a certain context has a particular meaning

[SOURCE: ISO 2382-1:1993, 01.01.01]

4.8
knowledge

cognizance which is based on reasoning

NOTE Adapted from ISO 5127:2001, 1.1.3.14.

4.9
metadata

data (4.4) about data

[SOURCE: ISO 19115:2003, 4.5]

4.10
ontology

formal representation of phenomena of a universe of discourse with an underlying vocabulary including definitions and axioms that make the intended meaning explicit and describe phenomena and their interrelationships

[SOURCE: ISO 19101-1:—⁶), 4.1.24]

4.11
registry

information (4.7) system on which a register is maintained

[SOURCE: ISO 19135:2005, 4.1.13]

4) To be published.

5) To be published.

6) To be published.

4.12

schema

formal description of a model

[SOURCE: ISO 19101-1:—⁷), 4.1.32]

4.13

Semantic Web

Web of *data* (4.4) with meaning

[SOURCE: ISO 19101-1:—⁸), 4.1.33]

NOTE The association of meaning allows data and *information* (4.7) to be understood and processed by automated tools as well as by people.

4.14

universe of discourse

view of the real or hypothetical world that includes everything of interest

[SOURCE: ISO 19101-1:—⁹), 4.1.36]

4.15

Uniform Resource Identifier (URI)

unique identifier for a resource, structured in conformance with IETF RFC 2396

[SOURCE: ISO 19136:2007, 4.1.65]

4.16

Web service

service that is made available through the Web

[SOURCE: ISO 19101-1:—¹⁰), 4.1.39]

NOTE A Web service usually includes some combination of programming and data. It may also include human resources.

5 Symbols and abbreviated terms

For the purpose of this Technical Specification, the following symbols and abbreviated terms apply.

HTTP	Hypertext Transfer Protocol
LCCS	Land Cover Classification System
LADM	Land Administration Domain Model
ODM	Ontology Definition Metamodel
OMG	Object Management Group
OWL	Web Ontology Language
OWL-DL	OWL - Description Logic
OWL-S	Semantic Markup for Web Services
